# Searching and Viewing Entities

## Using Basic and Advanced Search

### Using Basic Search

#### About this task

You can search for entities using three basic search modes:

- Search by Type – search based on a selected Entity type.
- Search by Classification – search based on a selected Atlas classification.
- Search by Term – search based on a specified glossary term.
- Search by Text – full-text search.

#### Procedure

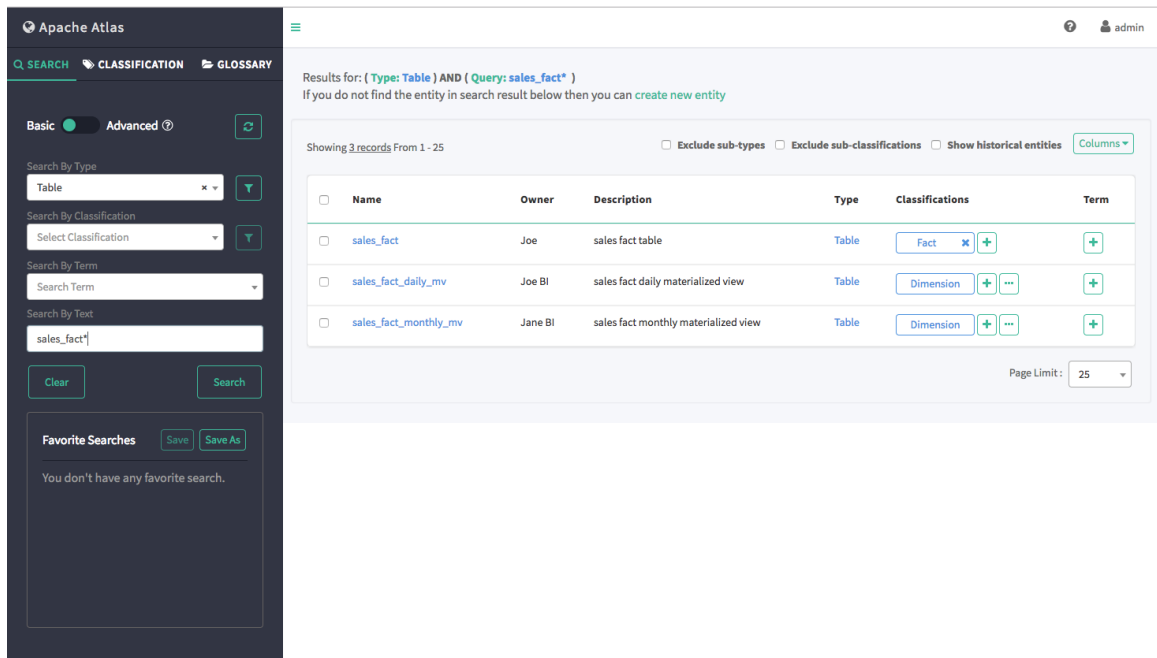

1. To search for entities, click SEARCH on the Atlas web UI. Select an entity type, an Atlas tag, or enter a text string, then click Search to display a list of the entities associated with the specified search criteria.
  - In the example below, we searched for the Table entity type.

The screenshot shows the Apache Atlas search interface. On the left is a dark sidebar with search options: 'Basic' (selected) and 'Advanced'. Under 'Search By Type', 'Table' is selected. Below are sections for 'Search By Classification', 'Search By Term', and 'Search By Text'. At the bottom of the sidebar are 'Favorite Searches' and a 'Search' button. The main content area shows 'Results for: Type: Table' and a list of 8 records. The table has columns for Name, Owner, Description, Type, Classifications, and Term. The records are:

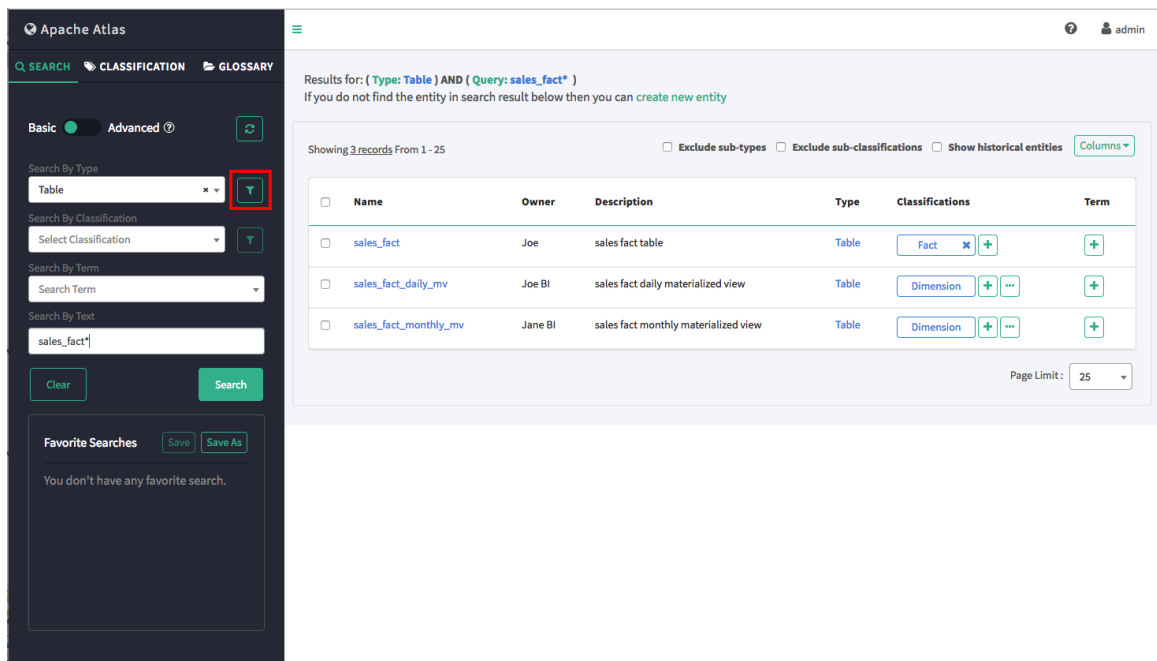

Name	Owner	Description	Type	Classifications	Term
customer_dim	feti	customer dimension table	Table	Dimension	
product_dim	John Doe	product dimension table	Table	Dimension	
sales_fact_monthly_mv	Jane BI	sales fact monthly materialized view	Table	Dimension	
sales_fact_daily_mv	Joe BI	sales fact daily materialized view	Table	Dimension	
logging_fact_monthly_mv	Tim ETL	logging fact monthly materialized view	Table	Log Data	
log_fact_daily_mv	Tim ETL	log fact daily materialized view	Table	Log Data	
sales_fact	Joe	sales fact table	Table	Fact	
time_dim	John Doe	time dimension table	Table	Dimension	

At the bottom right of the results area, there is a 'Page Limit' dropdown set to 25.

- You can also combine search criteria. In the example below, we combined Type and full-text search to find Table entities whose name contains the text string "sales\_fact".

- You can use the attribute filters to further refine search criteria. Click an Attribute Filter symbol to display the Attribute Filter pop-up.

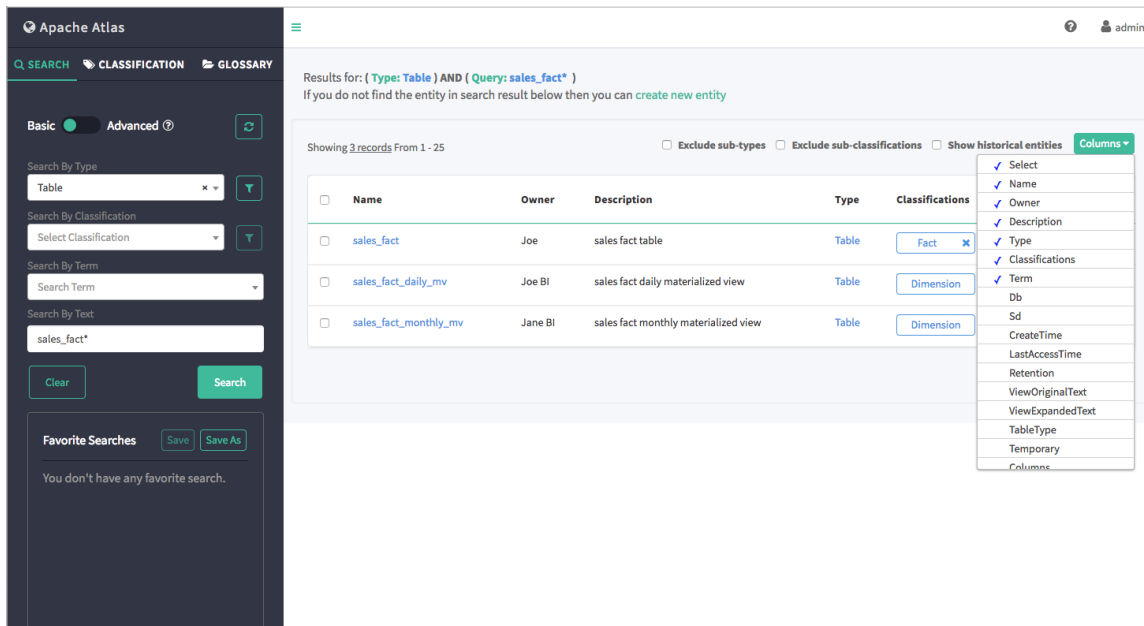

Use the selection boxes on the Attribute Filter pop-up to specify an attribute filter. The attributes listed reflect the entity type. In the following example, we set an attribute filter to return entities with an Owner attribute of "Joe".

- Click Add filter to add more attribute filters.
- Click Add filter group to add an attribute filter group.
- Click Delete to remove an attribute filter or filter group.
- Click Apply to temporarily save the attribute filter to the current search without applying it to the search results. Click Search to apply the attribute filter to the search results.

2. Click Columns to control which columns are displayed in the list of search results.

- To view detailed information about an entity, click the entity in the search results list. In the example below, we selected the "sales\_fact" table from the list of search results. You can use the tabs to view categories of information about an entity – for example, click Lineage to view the entity lineage.

- Click Clear to clear the search settings.

## Using Advanced Search

### About this task

To switch to Advanced search mode, slide the green toggle button from Basic to Advanced. You can search for entities using two advanced search modes:

- Search by Type – search based on a selected Entity type.
- Search by Query – search using an Apache Atlas DSL query. Atlas DSL (Domain-Specific Language) is a SQL-like query language that enables you to search metadata using complex queries. For more information on Atlas DSL queries, click the Apache Atlas "Advanced Search" link under "Related information" at the end of this topic.

### Procedure

1. To search for entities, select an entity type or enter an Atlas DSL search query, then click Search to display a list of the entities associated with the specified search criteria.

You can also combine search criteria. In the example below, we searched for Table entity types named "sales\_fact".

## Save searches

### About this task

You can use the Favorite Searches box to save both Basic and Advanced Atlas searches.

### Procedure

1. To demonstrate saved searches, let's start with a Basic search for the Table entity type.

Apache Atlas

<input type="checkbox"/>	sales_fact	Joe	sales fact table	Table	Fact  	
<input type="checkbox"/>	time_dim	John Doe	time dimension table	Table	Dimension  	

Page Limit: 25

- On the "Create your favorite search" pop-up, type a name for the new search in the Name box, then click Create. In this example, the new search name is "sales\_fact".

The screenshot shows the Apache Atlas search interface. A modal dialog titled "Create your favorite search" is open, with a text input field containing "sales\_fact" and "Name\*" as a label. Below the input are "Cancel" and "Create" buttons. In the background, the search results table is visible, showing various entities like customer\_dim, product\_dim, sales\_fact\_monthly\_mv, etc.

Name	Owner	Description	Type	Classifications	Term
customer_dim	fetl	customer dimension table	Table	Dimension	+
product_dim	John Doe	product dimension table	Table	Dimension	+
sales_fact_monthly_mv	Jane BI	sales fact monthly materialized view	Table	Dimension	+
sales_fact_daily_mv	Joe BI	sales fact daily materialized view	Table	Dimension	+
logging_fact_monthly_mv	Tim ETL	logging fact monthly materialized view	Table	Log Data	+
log_fact_daily_mv	Tim ETL	log fact daily materialized view	Table	Log Data	+
sales_fact	Joe	sales fact table	Table	Fact	+
time_dim	John Doe	time dimension table	Table	Dimension	+

8. The new search appears in the Favorite Searches box.

The screenshot shows the Apache Atlas search interface after the search criteria have been saved. The "Favorite Searches" box in the left sidebar now includes "sales\_fact" (highlighted with a red box) and "Table". The search results table shows 8 records for the type "Table".

Name	Owner	Description	Type	Classifications	Term
customer_dim	fetl	customer dimension table	Table	Dimension	+
product_dim	John Doe	product dimension table	Table	Dimension	+
sales_fact_monthly_mv	Jane BI	sales fact monthly materialized view	Table	Dimension	+
sales_fact_daily_mv	Joe BI	sales fact daily materialized view	Table	Dimension	+
logging_fact_monthly_mv	Tim ETL	logging fact monthly materialized view	Table	Log Data	+
log_fact_daily_mv	Tim ETL	log fact daily materialized view	Table	Log Data	+
sales_fact	Joe	sales fact table	Table	Fact	+
time_dim	John Doe	time dimension table	Table	Dimension	+

9. Next we add a full-text search string to find Table entities whose name contains the text string "sales\_fact", then click Search to update the search results. To save this new set of search criteria to the "sales\_fact" search, click Save under Favorite Searches.

### Note:

To modify a saved search, click the search name in the Favorite Searches list, update the search criteria, then click Save to save the new search settings.

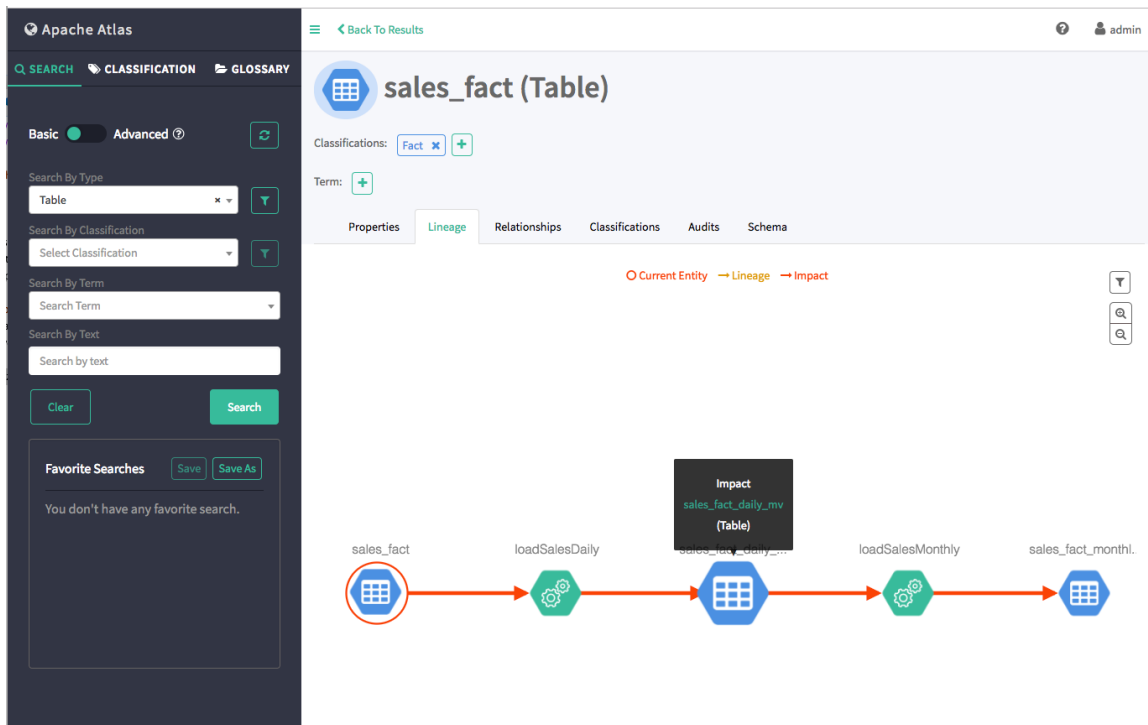

## View entity data lineage and impact

### Procedure

1. Data lineage and impact is displayed when you select an entity. In the following example, we ran a Type search for Table, selected the "sales\_fact" entity, and then clicked the Lineage tab. Data lineage and impact is displayed graphically, with each icon representing an action. You can use the zoom buttons to zoom in and out, and you can also click and drag to move the image.

- 2. Moving the cursor over an icon displays a pop-up with more information about the action that was performed. Double-clicking an icon takes you to that entity's Lineage tab.

- 3. The icons displayed reflect the applicable entity type. In the following example, we ran a Type search for hive\_table, selected the "part\_col\_privs" entity, and then clicked the Lineage tab. Here we can see icons for HDFS path, Hive process, and Hive table.

## View entity details

### About this task

When you select an entity, detailed information about the entity is available.

### Procedure

- The Properties tab displays the entity properties.

The screenshot shows the Apache Atlas interface for the 'sales\_fact (Table)' entity. The left sidebar contains search filters and a 'Favorite Searches' section with 'sales\_fact' listed. The main content area shows the 'Properties' tab with a table of key-value pairs.

Key	Value
columns	time_id product_id customer_id sales
createTime	1528835063147
db	Sales
description	sales fact table
lastAccessTime	1528835063147
name	sales_fact
owner	Joe
qualifiedName	sales_fact
retention	1528835063147
sd	0450e753-8267-48fc-bc60-c247f5404f06
tableType	Managed
temporary	false
viewExpandedText	
viewOriginalText	

- The Lineage tab displays the entity lineage.

The screenshot shows the Apache Atlas interface for the 'sales\_fact (Table)' entity, with the 'Lineage' tab selected. A legend indicates: Current Entity (blue table icon), Lineage (red arrow), and Impact (green gear icon). The lineage diagram shows a flow from 'sales\_fact' to 'loadSalesDaily' (Impact), then to 'sales\_fact\_daily\_...' (Current Entity), then to 'loadSalesMonthly' (Impact), and finally to 'sales\_fact\_monthly' (Current Entity).

```

    graph LR
      A[sales_fact] --> B[loadSalesDaily]
      B --> C[sales_fact_daily_...]
      C --> D[loadSalesMonthly]
      D --> E[sales_fact_monthly]
  
```

- The Relationships tab displays the entity relationships.

The screenshot shows the Apache Atlas interface for the 'sales\_fact (Table)' entity. The 'Relationships' tab is active, displaying a diagram where a 'Table' icon is connected to an 'inputToProcesses' icon. The left sidebar contains search filters, and the top navigation bar includes 'Back To Results' and a user profile for 'admin'.

- Click the Classifications tab to display the classifications associated with the entity. In this case, the "Fact" classification has been associated with the "sales\_fact" table.

The screenshot shows the Apache Atlas interface for the 'sales\_fact (Table)' entity. The 'Classifications' tab is active, displaying a table with the following data:

Classification	Attributes	Action
Fact	NA	

The table also includes a 'Showing 1 - 1' indicator and a 'Show Propagated Classifications' checkbox. The left sidebar and top navigation bar are consistent with the previous screenshot.

- The Audits tab provides a complete audit trail of all events in the entity history. You can use the Detail button next to each action to view more details about the event.

## Manually create entities

### About this task

Currently there is no Atlas hook in HDP for HDFS or Kafka. For these components, you must manually create entities in Atlas. You can then associate tags with these entities and control access using Ranger tag-based policies.

**Note:** When upgrading to HDP-3.0 from earlier versions, you may need to manually enable the HBase hook post-upgrade. On the Ambari dashboard, select HBase > Configs > Advanced hbase-env, then select the Enable Atlas Hook check box. Click Save, then restart HBase and any other services that require a restart.

## Procedure

1. On the Atlas web UI Search page, click the create new entity link at the top of the page.

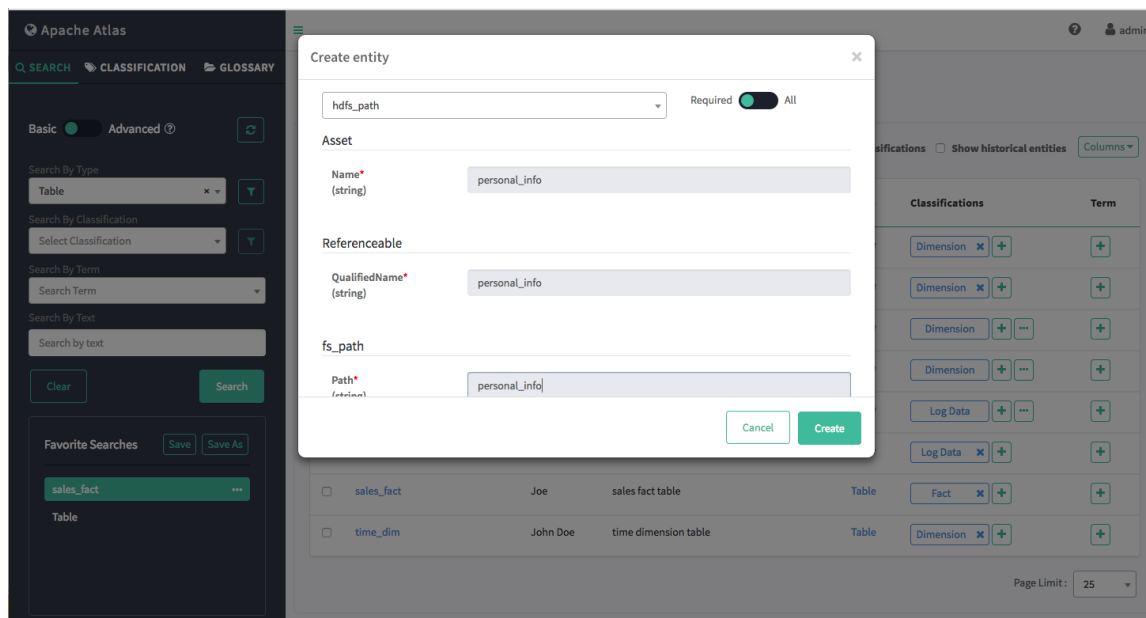

The screenshot shows the Apache Atlas Search interface. On the left, there are search filters for Type (Table), Classification, Term, and Text. The main area displays search results for 'Type: Table'. A red box highlights the 'create new entity' link. Below the link is a table of results with columns: Name, Owner, Description, Type, Classifications, and Term. The table lists various entities like customer\_dim, product\_dim, sales\_fact\_monthly\_mv, etc.

Name	Owner	Description	Type	Classifications	Term
customer_dim	fetl	customer dimension table	Table	Dimension	+
product_dim	John Doe	product dimension table	Table	Dimension	+
sales_fact_monthly_mv	Jane BI	sales fact monthly materialized view	Table	Dimension	+
sales_fact_daily_mv	Joe BI	sales fact daily materialized view	Table	Dimension	+
logging_fact_monthly_mv	Tim ETL	logging fact monthly materialized view	Table	Log Data	+
log_fact_daily_mv	Tim ETL	log fact daily materialized view	Table	Log Data	+
sales_fact	Joe	sales fact table	Table	Fact	+
time_dim	John Doe	time dimension table	Table	Dimension	+

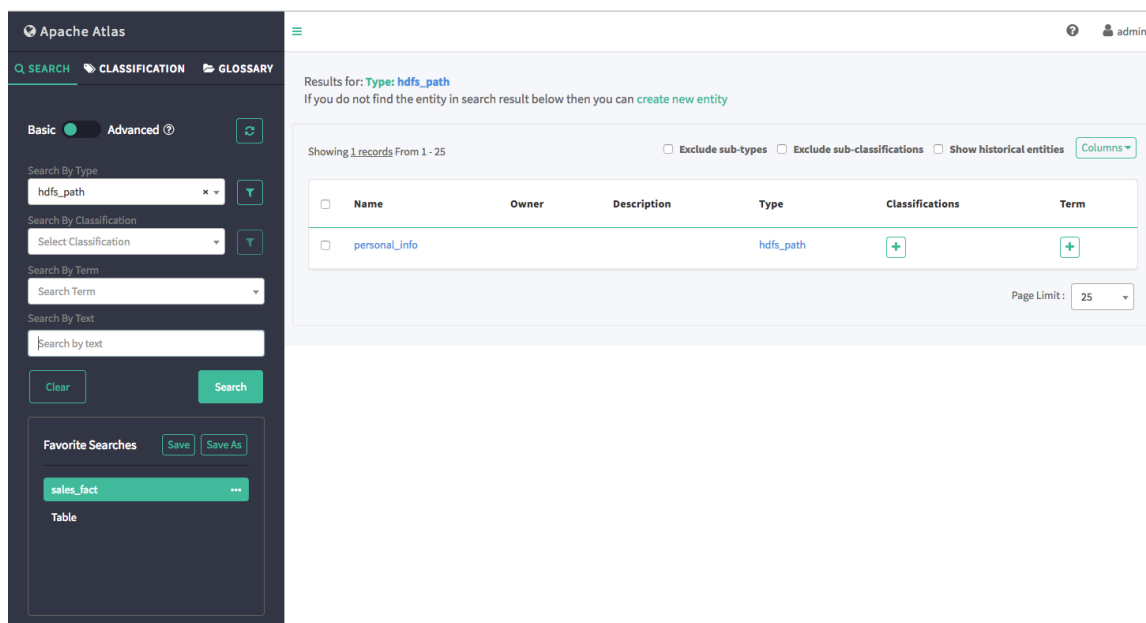

2. On the "Create entity" pop-up, select an entity type.

The screenshot shows the Apache Atlas Search interface with a 'Create entity' pop-up dialog open. The dialog has a dropdown menu for selecting an entity type, with 'hdfs\_path' selected. There is also a 'Required' toggle switch set to 'All' and 'Cancel' and 'Create' buttons.

3. Enter the required information for the new entity. Click All to display both required and non-required information. Click Create to create the new entity.

- The entity is created and returned in search results for the applicable entity type. You can now associate classifications and terms with the new entity and control access to the entity with Ranger policies.

## Working with Atlas Classifications

### Create Atlas classifications

#### Procedure

- On the Atlas web UI, click CLASSIFICATION, then click the + icon.

Page Limit: 25

- The new classification appears in the Classifications list.

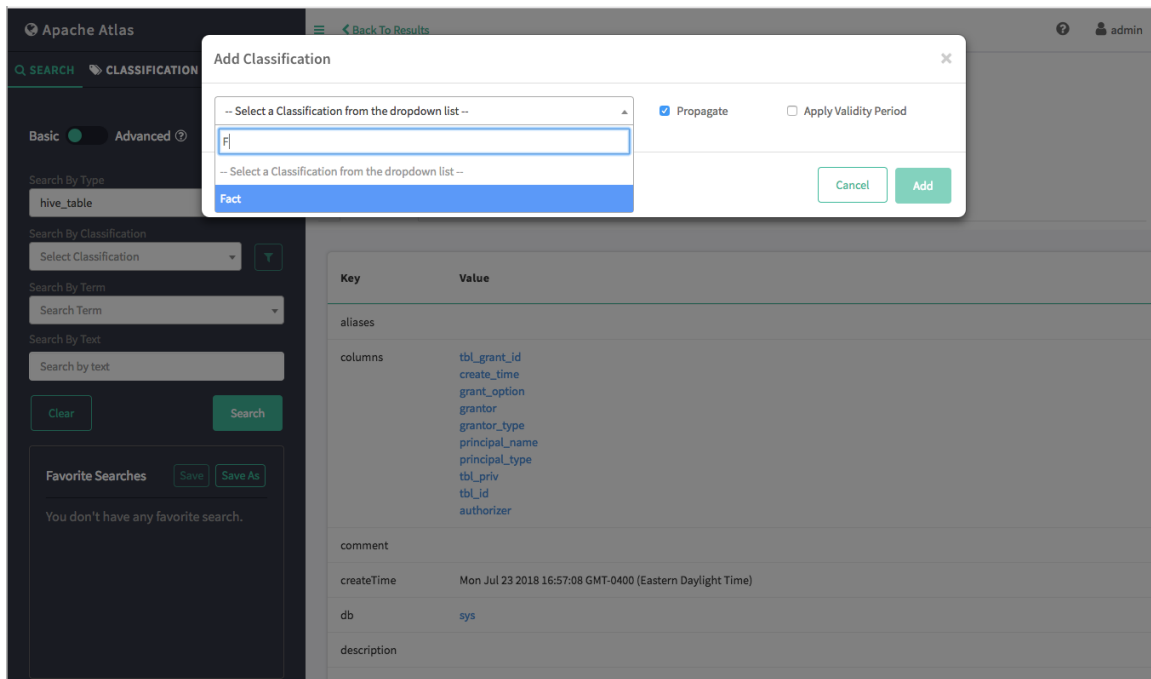

## Associate classifications with entities

### Procedure

1. Select an entity. In the example below, we searched for all hive\_table entities, and then selected the "tbl\_privs" table from the list of search results. To associate a classification with an entity, click the + icon next to the "Classifications:" label.

Key	Value
aliases	
columns	tbl_grant_id create_time grant_option grantor grantor_type principal_name principal_type tbl_priv tbl_id authorizer
comment	
createTime	Mon Jul 23 2018 16:57:08 GMT-0400 (Eastern Daylight Time)
db	sys
description	
lastAccessTime	Mon Jul 23 2018 16:57:08 GMT-0400 (Eastern Daylight Time)
name	tbl_privs
owner	hive

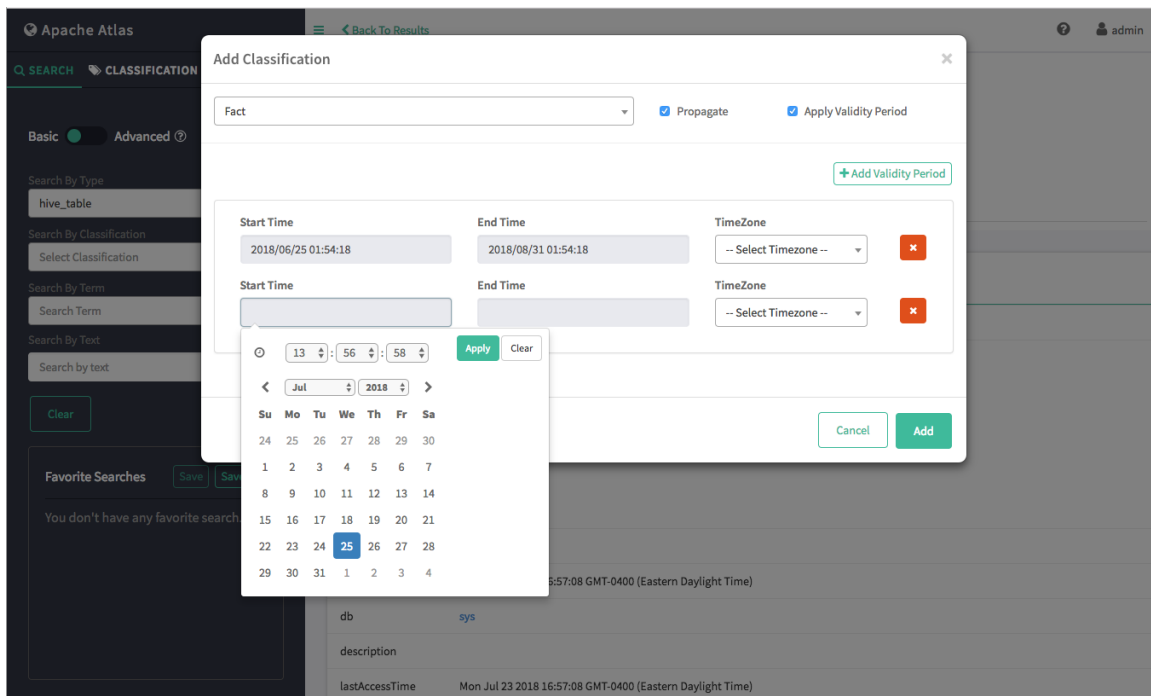

2. On the Add Classification pop-up, click the classification selection box, then select the classification you would like to associate with the entity. You can filter the list of classifications by typing text in the selection box.

3. After you select a classification, the Add Classification pop-up is redisplayed with the selected classification.

- Select the Propagate checkbox to add the classification, along with any associated attributes, to all downstream entities.
- Select the Apply Validity Period checkbox to limit the classification assignment to a specified time period. Click Add Validity Period to specify additional validity periods.

Click Add to associate the classification with the entity.

4. The new classification is displayed next to the "Classifications:" label on the entity page.

tbl\_privs (hive\_table)

Classifications: PII x Fact x +

Term: +

Properties Lineage Relationships Classifications Audits Schema

Showing 1 - 2  Show Propagated Classifications

Classification	Attributes		Action
	Name	Value	
PII	customer	-	[trash] [edit]
	employee	-	
	partner	-	
Fact	NA		[trash] [edit]

< 1 >

- To remove a classification from an entity, click the x symbol on the classification label, then click Remove on the confirmation pop-up. This removes the classification association with the entity, but does not delete the classification itself.

You can also select the Classifications tab on the entity page, then click the Delete (trash can) symbol for the classification.

The screenshot shows the Apache Atlas interface. On the left is a search sidebar with filters for 'hive\_table'. The main area displays a table for 'tbl\_privs' with columns 'Key' and 'Value'. A modal dialog titled 'Remove Classification Assignment' is open, asking to remove the 'Fact' assignment from 'tbl\_privs (hive\_table)'. The dialog has 'Cancel' and 'Remove' buttons.

7. You can also associate a classification with an entity by clicking the + symbol for the entity in the Classifications column in a list of search results.

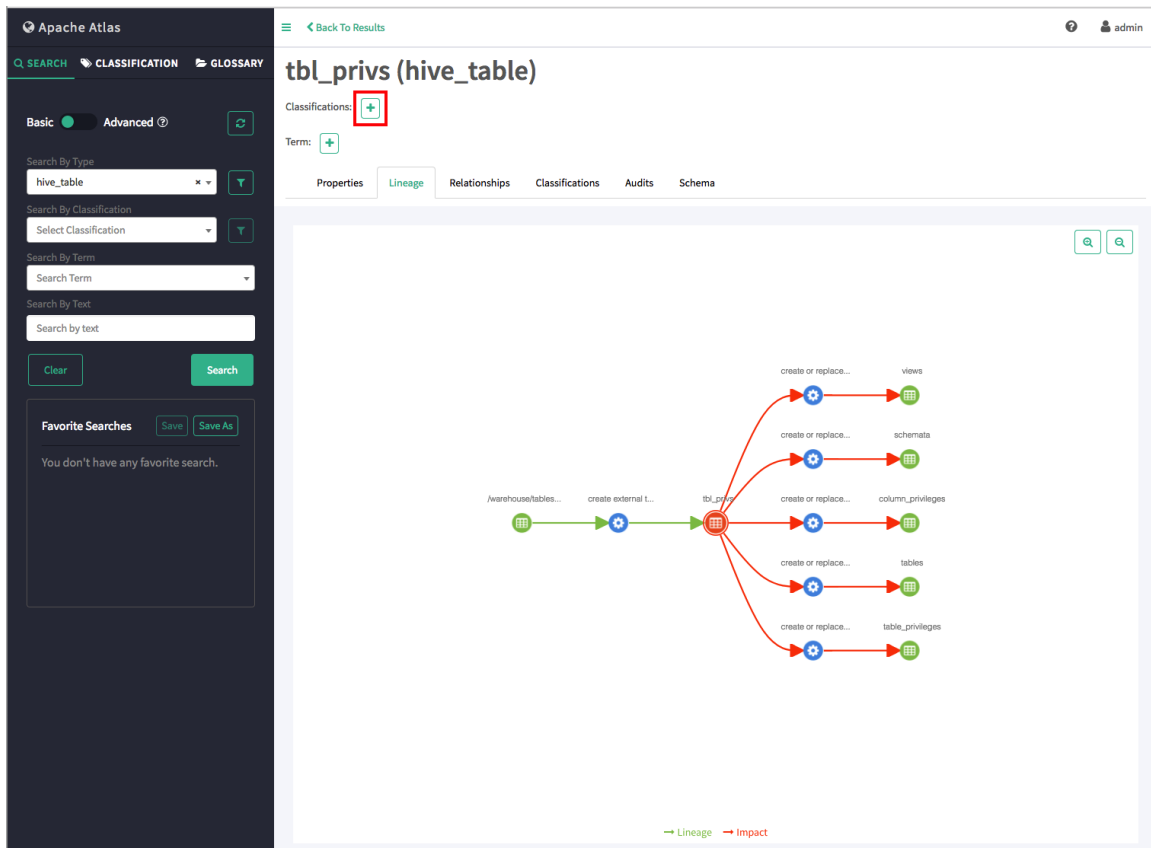

The screenshot shows the Apache Atlas search results for 'hive\_table'. The search sidebar on the left is visible. The main area shows a list of 25 records. The 'tbl\_privs' record is highlighted, and the '+' icon in the 'Classifications' column is circled in red.

Name	Owner	Description	Type	Classifications	Term

## Propagate classifications to derived entities

### Procedure

1. Select an entity. In the example below, we searched for all `hive_table` entities, and then selected the `tbl_privs` table from the list of search results. Clicking Lineage reveals that this table has derived (or "downstream") entities. To associate a classification with an entity, click the + icon next to the "Classifications:" label.

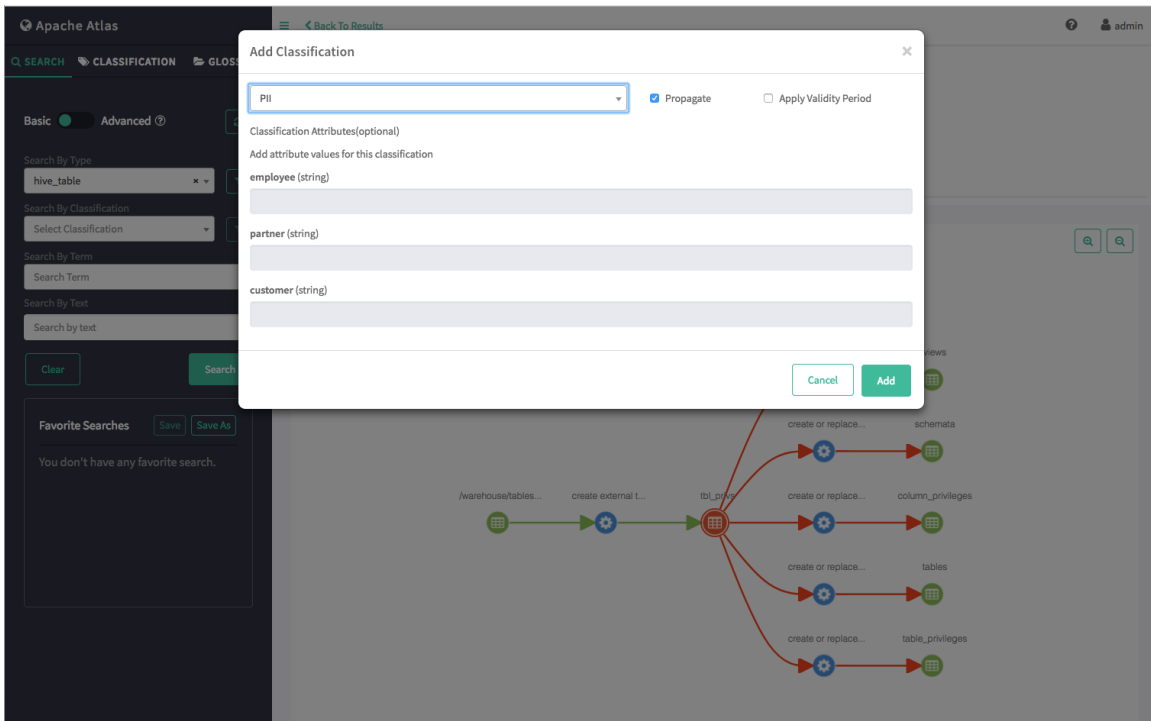

2. On the Add Classification pop-up, click the classification selection box, then select the classification you would like to associate with the entity. You can filter the list of classifications by typing text in the selection box. In the following example we select the PII classification

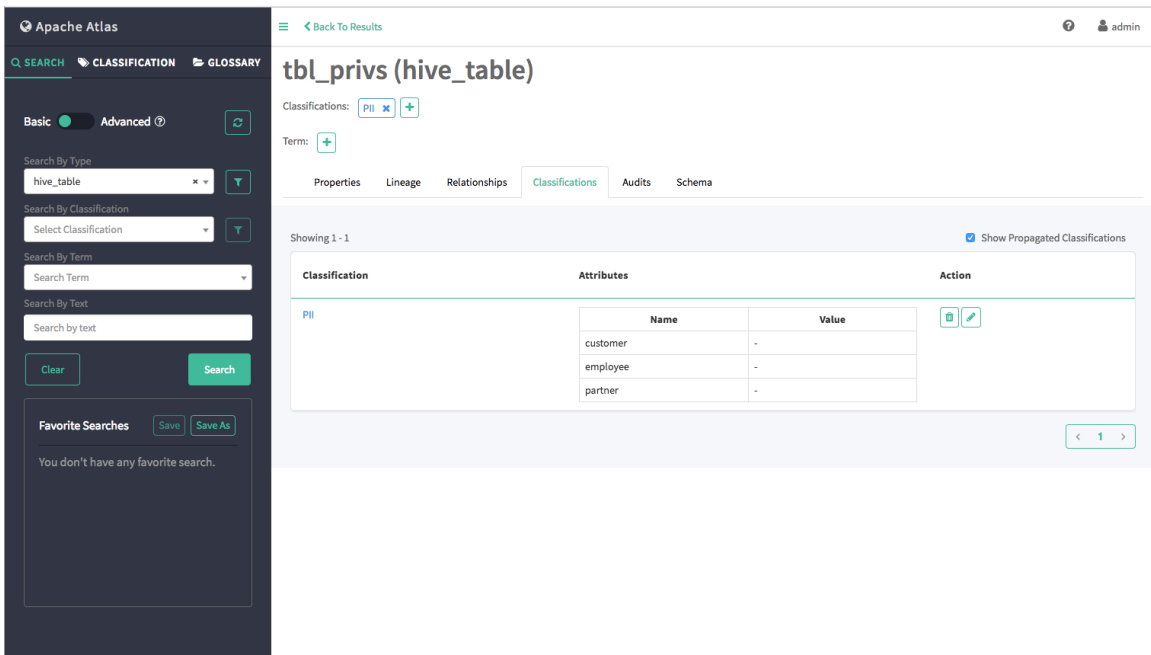

3. After you select a classification, the Add Classification pop-up is redisplayed with the selected classification.
  - Select the Propagate checkbox to add the classification, along with any associated attributes, to all downstream entities.

- If the classification has attributes, you can use the text boxes to add attribute values.

Click Add to associate the classification with the entity.

4. The new classification is displayed next to the "Classifications:" label on the entity page, and is also listed on the Classifications tab (along with any associated attributes).

5. Now we can double-click in the Lineage chart to open one of the downstream entities. In this example we double-click the icon for the "table\_privileges" table.

The screenshot shows the Apache Atlas interface for the 'tbl\_privs (hive\_table)' entity. The left sidebar contains search filters for Type, Classification, Term, and Text. The main area shows a lineage chart with a central 'tbl\_privs' node (highlighted with a red box) and several downstream nodes. The 'tbl\_privs' node has a 'PII' classification. The downstream nodes are 'warehouse/tables...', 'create external T...', 'tbl\_privs', 'create or replace... views', 'create or replace... schemata', 'create or replace... column\_privileges', 'create or replace...', and 'create or replace...'.

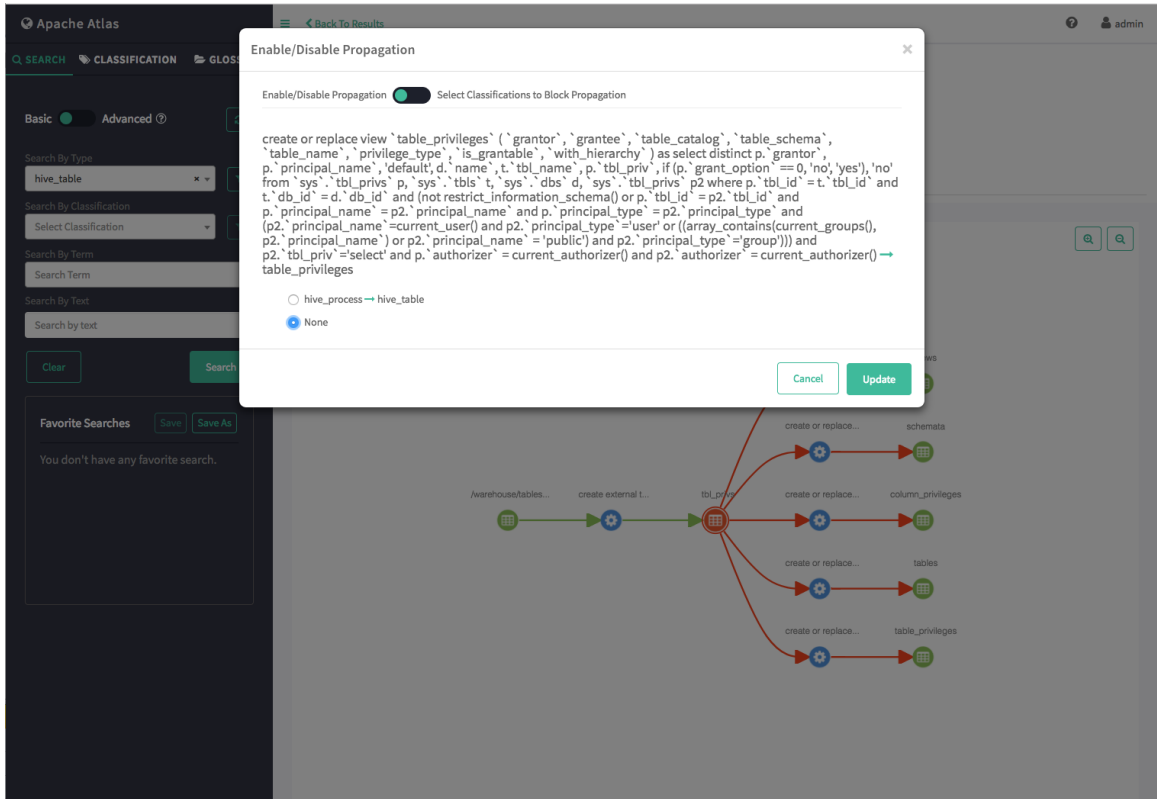

6. On the "table\_privileges" entity page, the propagated classification is displayed next to the "Propagated Classifications:" label, and is also listed on the Classifications tab (along with the associated attributes). Clicking Propagated From on the Classifications tab opens the "tbl\_privs" parent entity page.
- Any subsequent attribute updates in the parent entity classification will also be applied to all downstream entities.
  - Removing a propagated classification from a parent entity also removes the classification from all downstream entities.

The screenshot shows the Apache Atlas interface for the 'table\_privileges (hive\_table)' entity. The left sidebar contains search filters. The main area shows the 'Classifications' tab, which displays a table with columns for Classification, Attributes, and Action. The 'PII' classification is listed with a 'Propagated From' link. The 'Attributes' table shows columns for Name and Value, with rows for customer, employee, and partner.

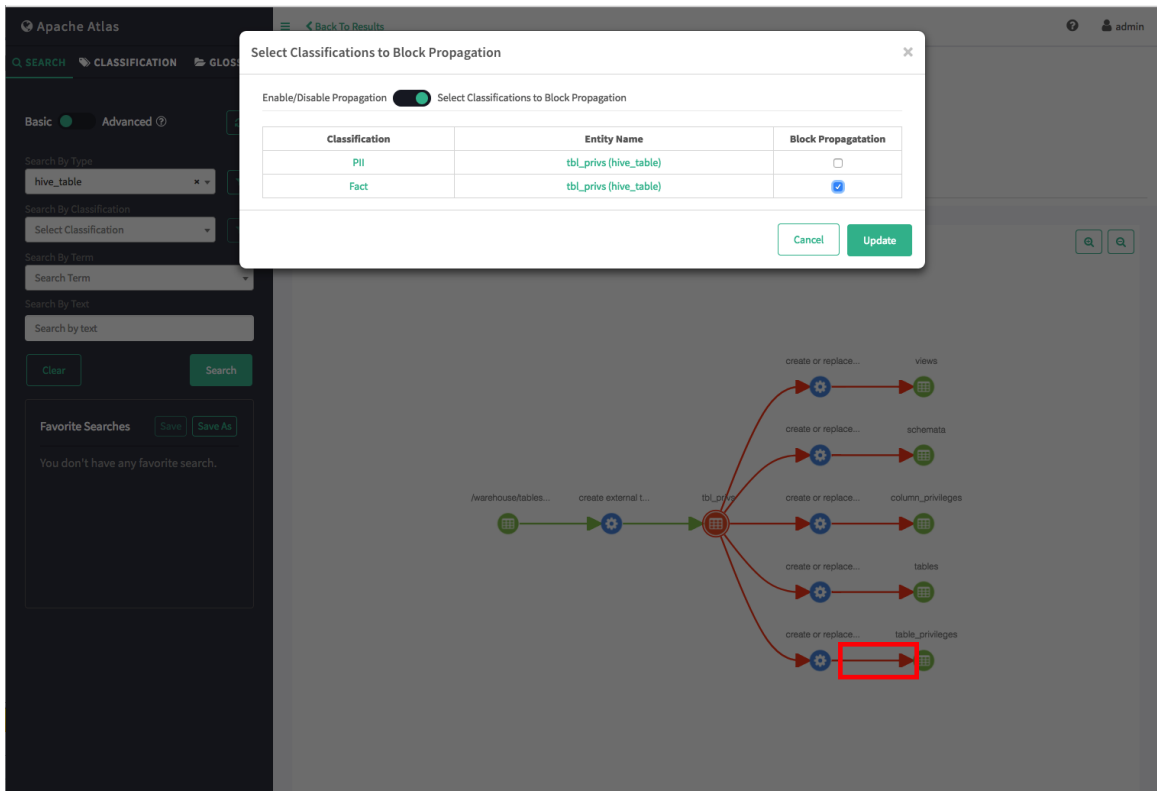

Classification	Attributes	Action								
PII <a href="#">Propagated From</a>	<table border="1"> <thead> <tr> <th>Name</th> <th>Value</th> </tr> </thead> <tbody> <tr> <td>customer</td> <td>-</td> </tr> <tr> <td>employee</td> <td>-</td> </tr> <tr> <td>partner</td> <td>-</td> </tr> </tbody> </table>	Name	Value	customer	-	employee	-	partner	-	
Name	Value									
customer	-									
employee	-									
partner	-									

7. To remove a propagated classification from a downstream entity, click the upstream line segment ("lineage edge") next to the entity in the Lineage chart. In the following example we clicked the upstream line segment for the derived "table\_privileges" tale.

- To disable all downstream classifications, select None, then click Update.

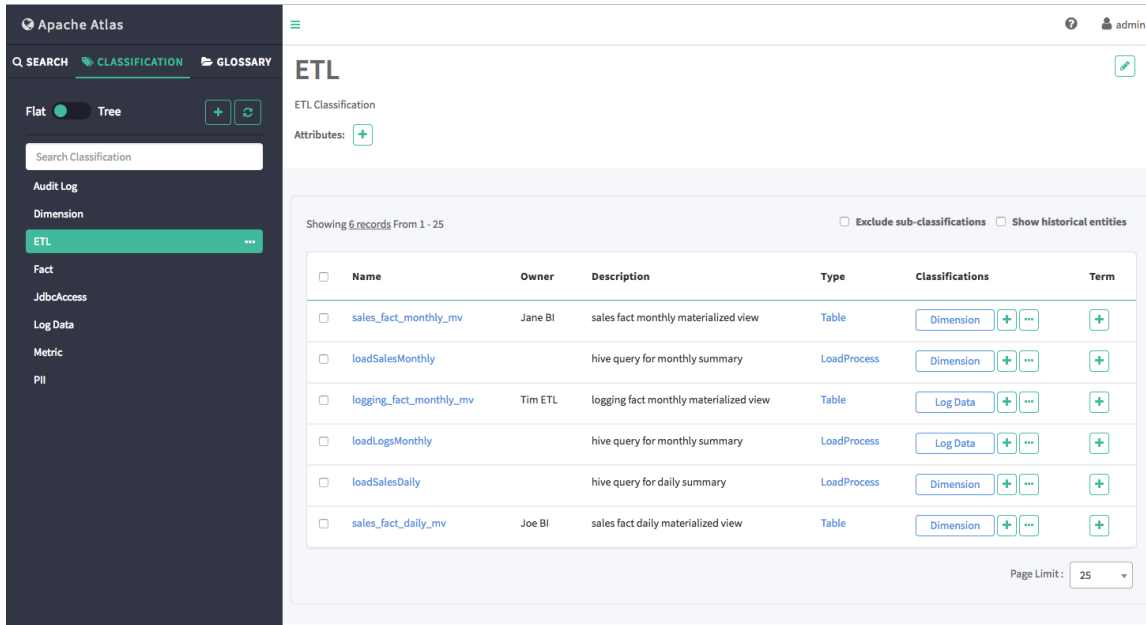

- To disable a subset of classification propagations to block, click Select Classifications to Block Propagation, select the classifications to block, then click Update.

## Search for entities associated with classifications

### Procedure

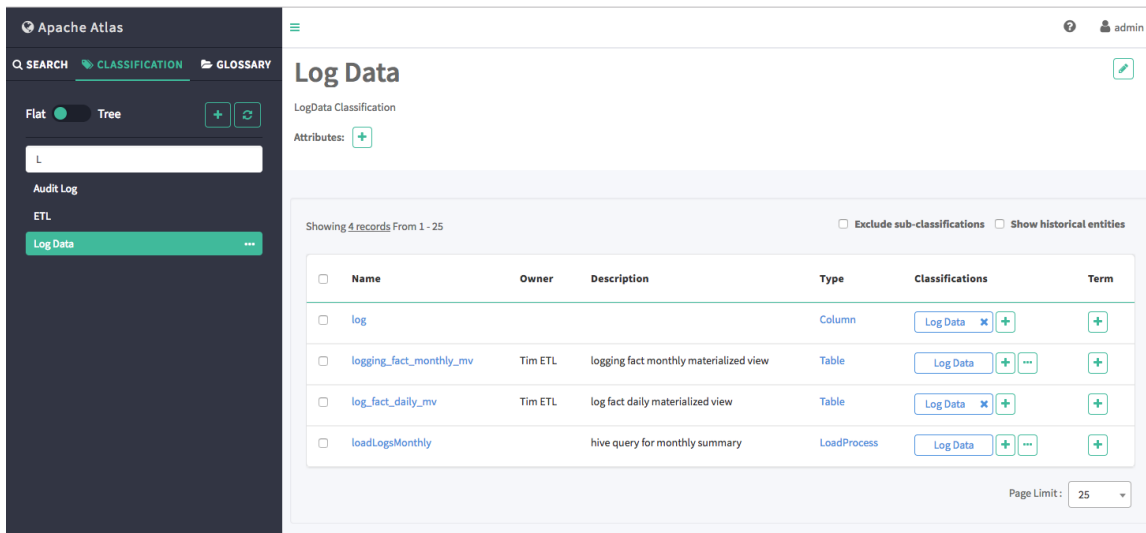

1. To display a list of all of the entities associated with a classification, click the classification name in the Atlas Classifications list.

The screenshot shows the Apache Atlas interface. On the left, the 'CLASSIFICATION' tab is active, and 'ETL' is selected under the 'Dimension' category. The main content area displays the 'ETL Classification' page. It includes a search bar, a table of entities, and a 'Page Limit' dropdown set to 25.

Name	Owner	Description	Type	Classifications	Term
sales_fact_monthly_mv	Jane BI	sales fact monthly materialized view	Table	Dimension	+
loadSalesMonthly		hive query for monthly summary	LoadProcess	Dimension	+
logging_fact_monthly_mv	Tim ETL	logging fact monthly materialized view	Table	Log Data	+
loadLogsMonthly		hive query for monthly summary	LoadProcess	Log Data	+
loadSalesDaily		hive query for daily summary	LoadProcess	Dimension	+
sales_fact_daily_mv	Joe BI	sales fact daily materialized view	Table	Dimension	+

2. To filter the Classifications list based on a text string, type the text in the "Search Classifications" box. The list is filtered dynamically as you type to display the classifications that contain that text string. You can click a classification in the filtered list to display the entities associated with that classification.

The screenshot shows the Apache Atlas interface. On the left, the 'CLASSIFICATION' tab is active, and 'Log Data' is selected under the 'Dimension' category. The main content area displays the 'Log Data Classification' page. It includes a search bar with the letter 'L' entered, a table of entities, and a 'Page Limit' dropdown set to 25.

Name	Owner	Description	Type	Classifications	Term
log			Column	Log Data	+
logging_fact_monthly_mv	Tim ETL	logging fact monthly materialized view	Table	Log Data	+
log_fact_daily_mv	Tim ETL	log fact daily materialized view	Table	Log Data	+
loadLogsMonthly		hive query for monthly summary	LoadProcess	Log Data	+

3. You can also search for entities associated with a classification by clicking the ellipsis symbol for the classification and selecting Search Classification. This launches a DSL search query that returns a list of all entities associated with the classification.

The screenshot shows the Apache Atlas interface for managing PII classifications. The left sidebar has a search bar and a list of classification types, with 'PII' selected. The main area shows a table of 4 records for the PII classification. The table columns are Name, Owner, Description, Type, Classifications, and Term. The records are for 'customer\_id', 'address', 'customer\_id', and 'name', all of which are of type 'Column' and have 'PII' as their classification. A 'Page Limit' dropdown is set to 25.

4. You can also use Basic and Advanced Search to search for entities associated with a classification.

[Using Basic and Advanced Search](#)

## Managing Business Terms with Atlas Glossaries

You can use the Apache Atlas Glossary feature to organize and discover data stored in Hadoop.

### Overview

The Apache Atlas Glossary feature enables you to define a hierarchical set of business terms that represents your business domain. You can then associate these glossary terms with the metadata entities that Atlas manages. This hierarchical business catalog makes it easier to organize and discover data stored in Hadoop.

#### Atlas Terms

The Atlas Glossary Terms feature enables you to create glossaries and create terms within each glossary. The Terms list can be thought of as of a flat (but searchable) list of business terms organized by glossaries.

#### Atlas Categories

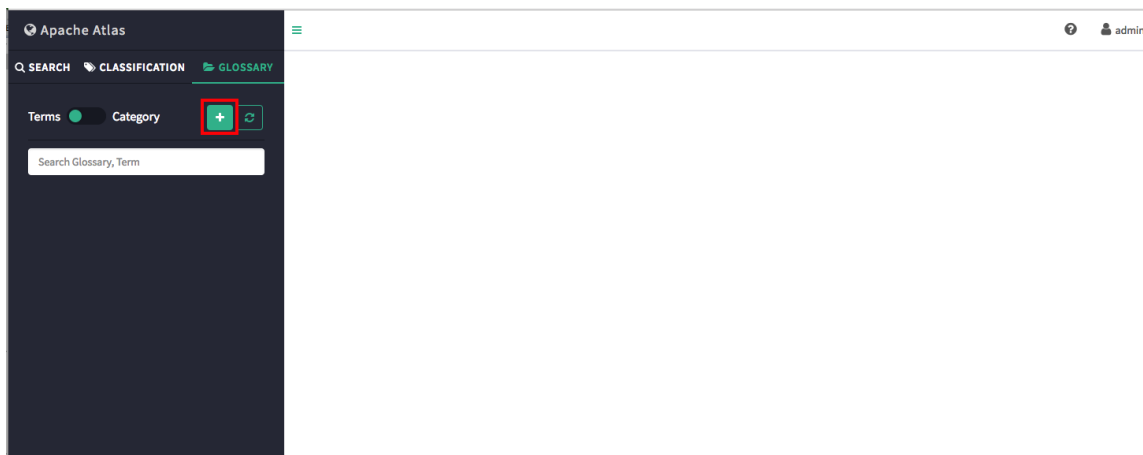

The Atlas Glossary Category feature enables you to create a hierarchy of categories and subcategories under each glossary. You can then associate terms with these categories, thereby establishing an organizational hierarchy of business terms.

## Create a glossary

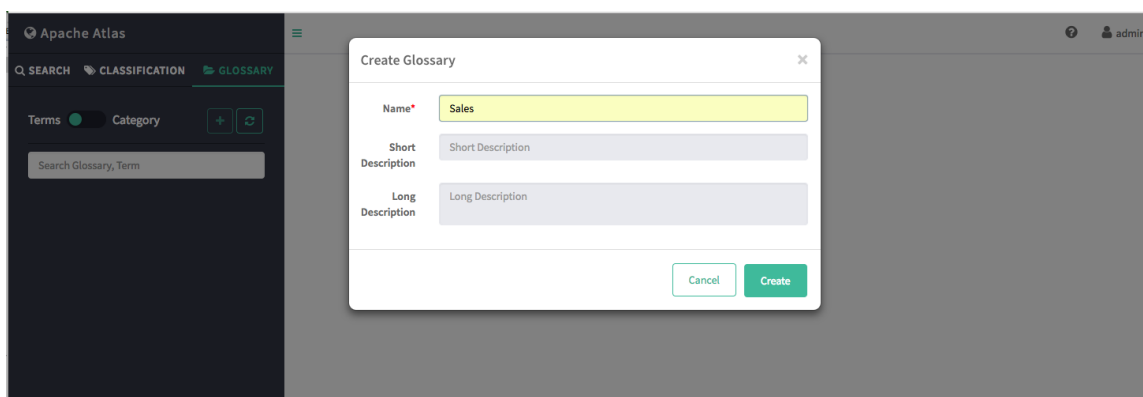

### Procedure

1. On the Atlas web UI, click GLOSSARY, then click the + icon.

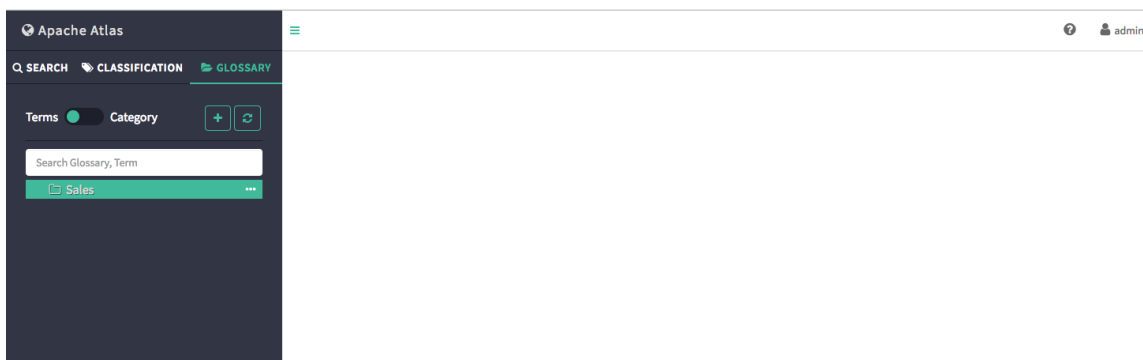

2. On the Create Glossary pop-up, type in a name and optional short and long descriptions for the glossary. Click Create to create the new glossary.

3. The new glossary appears in the Glossary list.

## Create glossary terms

### Procedure

1. On the Atlas Glossary page, click the ellipsis symbol next to a glossary, then click Create Term.

2. On the Create Term pop-up, type in a name and optional short and long descriptions for the term. Click Create to create the new glossary term.

3. The new term appears under the glossary.

## Associate glossary terms with entities

### Procedure

1. Select an entity. In the example below, we searched for all Table entities, and then selected the "customer\_dim" table from the list of search results. To associate a term with the entity, click the + icon next to the Terms: label.

Apache Atlas

## Associate glossary terms with related terms

## Procedure

1. Select a glossary term, then click Related Terms. On the Related Terms tab, click the + symbol for the applicable related term. In this example we add a "seeAlso" related term.

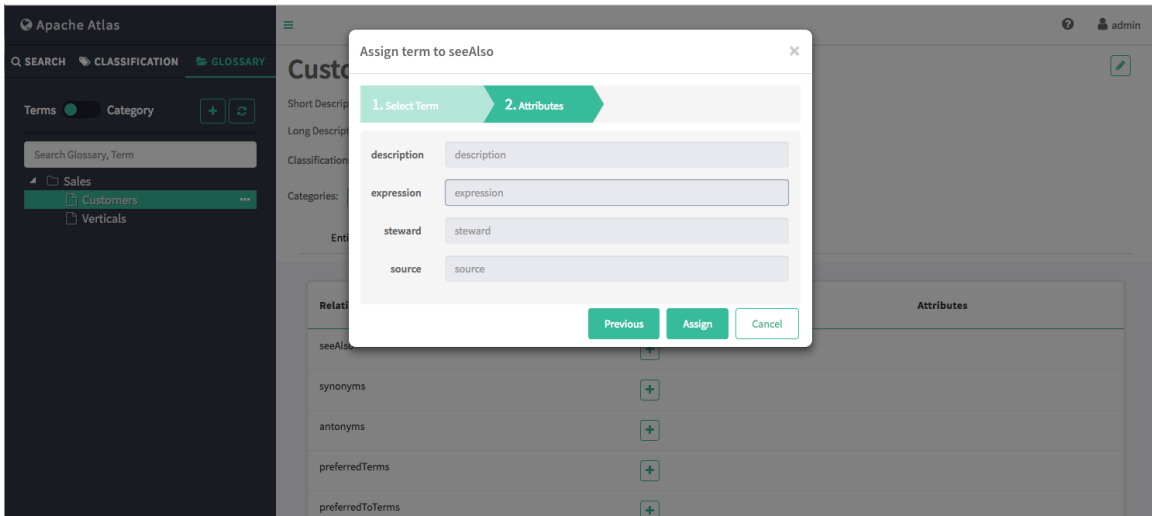

The screenshot shows the Apache Atlas interface for the 'Customers' glossary term. The 'Related Terms' tab is active, displaying a table of relation types and their corresponding plus signs for adding related terms. The 'seeAlso' relation type is highlighted with a red box.

Relation Types	Related Terms	Attributes
seeAlso	<input type="checkbox"/>	
synonyms	<input type="checkbox"/>	
antonyms	<input type="checkbox"/>	
preferredTerms	<input type="checkbox"/>	
preferredToTerms	<input type="checkbox"/>

replacedBy	<input type="checkbox"/>	
translationTerms	<input type="checkbox"/>	
translatedTerms	<input type="checkbox"/>	
isA	<input type="checkbox"/>	
classifies	<input type="checkbox"/>	
validValues	<input type="checkbox"/>	
validValuesFor	<input type="checkbox"/>	

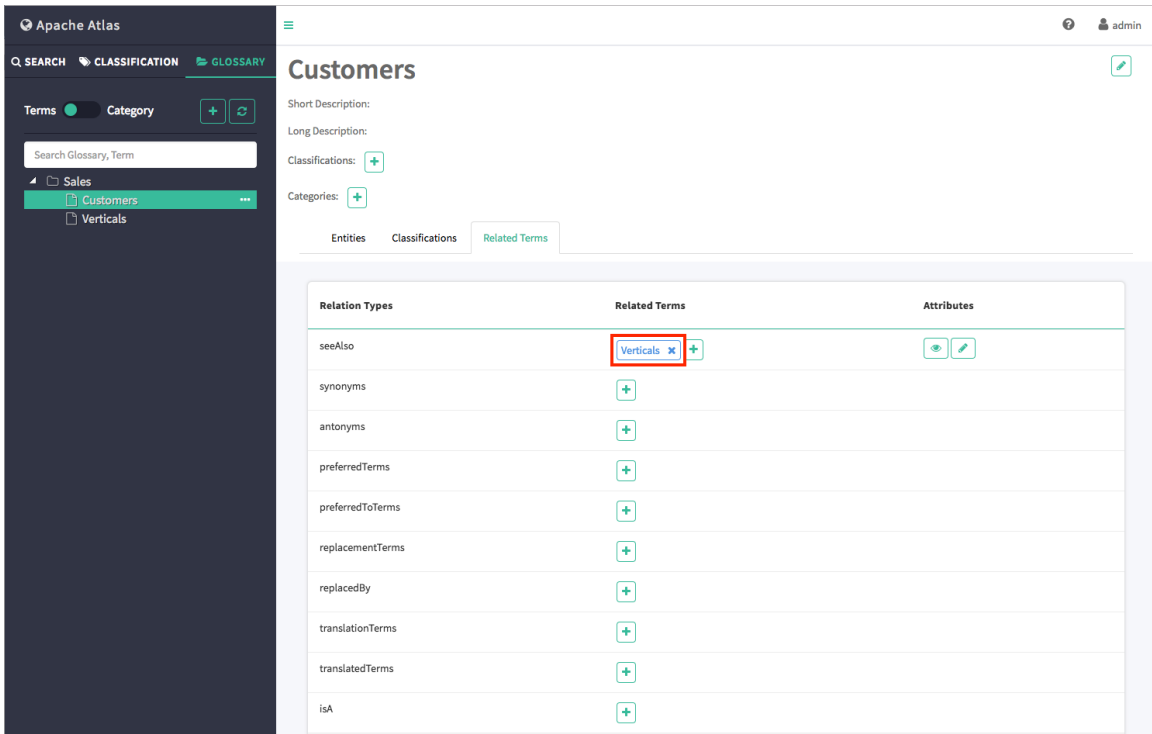

2. On the "Assign term to seeAlso" pop-up, browse to select a related glossary term. Here we have selected the term "Verticals". You can also filter the list of tags by typing text in the Search Term box, and then click to select a term. Click Next after selecting a term.

The screenshot shows the 'Assign term to seeAlso' pop-up dialog. The dialog has two steps: '1. Select Term' and '2. Attributes'. The 'Verticals' term is selected in the list of terms under the 'Sales' category.

3. On the "Assign term to seeAlso" pop-up, optionally specify attributes, then click Assign.

4. The new "seeAlso" related term is displayed on the Related Terms tab.

5. The "Customers" term is also listed as a "seeAlso" related term on the "Verticals" Related Terms tab.
